DETAILED ACTION

Allowable Subject Matter

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claims 1, 13, 26 and 35:

The primary reason for the allowance of claim 1 is the inclusion of the method steps of: in response to the detection of a higher, second temperature, transitioning the cache from a write-back cache to a write-through cache. It is this feature found in the claim, as it is claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

The primary reason for the allowance of claim 13 is the inclusion of: in response to the detection of a higher, second temperature, transitioning the cache from a write-back cache to a write-through cache. It is this feature found in the claim, as it is claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

The primary reason for the allowance of claim 26 is the inclusion of: a storage to store a cache driver to monitor a temperature of said cache memory and adjusting the operation of a system using said memory at a first temperature and, in response to the detection of a higher, second temperature, transitioning the cache from a write-back cache. It is this feature found in the claim, as it is claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

The primary reason for the allowance of claim 35 is the inclusion of: a component to receive an indication of a first temperature of a cache memory and to develop a signal to transition the cache memory from a write-back cache to a write-through cache in response to said temperature indication, said component to receive an indication of a second temperature, lower than said first temperature, and to develop a signal to vary the operation of a system to adjust for the temperature affected operation of said cache memory. It is this feature found in the claim, as it is claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

Claims 2 and 4-12 are allowed due to their dependency on claim 1.

Claims 14,16-21and 23-25 are allowed due to their dependency on claim 13.

Claims 27-34 are allowed due to their dependency on claim 26.

Claims 37-42 are allowed due to their dependency on claim 35.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Watanabe (USPN 5,598,395) teaches data loss prevention in a cache memory when the temperature of an optical recording medium is abnormal, and

Art Unit: 2863

Giovannetti (USPN 5,815,648) teaches an apparatus and method for changing the cache mode dynamically in a storage array system.
